

DNA fingerprinting Technology for Medico-legal Purpose

Dr T D Dogra,
SGT UNIVERSITY
GURUGRAM

Introduction and History

- **Definition** – Chromosomes are the rod-shaped, dark-stained bodies seen during metaphase stage of mitosis.
- **Strausberger** discovered chromosome in 1875
- The term chromosome was coined by **Waldeyer** in 1888
- Term initiated as (Chroma= Colour and Soma= body)

Chromosome shape

- The shape of chromosome is generally determined by the position of centromere
- Chromosomes generally exist in three different shapes, *viz., rod shape, J shape and V shape*

Types of chromosome

- According to the relative position of centromere chromosomes are divided into four types

Centromere Localizations

metacentric

sub-metacentric

acrocentric

telocentric

● = centromere

?

Somatic chromosome number of some common plants and animals

Sr. no	Scientific name	Common name	Chromosome number	
			Somatic	Gametic
1	<i>Homo sapiens</i>	Human	46	23
2	<i>Oryza sativa</i>	Rice	24	12
3	<i>Rattus norvegicus</i>	rat	42	21
4	<i>Pisum sativum</i>	Pea	14	7
5	<i>Daucus carota</i>	Carrot	20	10
6	<i>Allium cepa</i>	Onion	16	8
7	<i>Zea mays</i>	Maize	20	10
8	<i>Apis mellifera</i>	Honey bee	32	16
9	<i>Musca domestica</i>	House fly	12	6
10	<i>Felis domesticum</i>	Cat	38	19
11	<i>Drosophila melanogaster</i>	Fruit fly	8	4
12	<i>Neurospora Crassa</i>	Bread mold	14	7

Chromosome structure

- **Structurally chromosomes consists of seven parts**
 1. Centromere
 2. Chromatid
 3. Secondary constriction and satellite
 4. Telomere
 5. Chromomere
 6. Chromonema
 7. Matrix

Relative position of chromosome in cell

The Human Genome

Each Chromosome has the Genetic material-DNA

Chemical Structure of DNA

Four nitrogenous bases

Nucleotides:
Phosphate
Sugar
Base

Purines

Adenine (A)

Guanine (G)

Pyrimidines

Thymine (T)

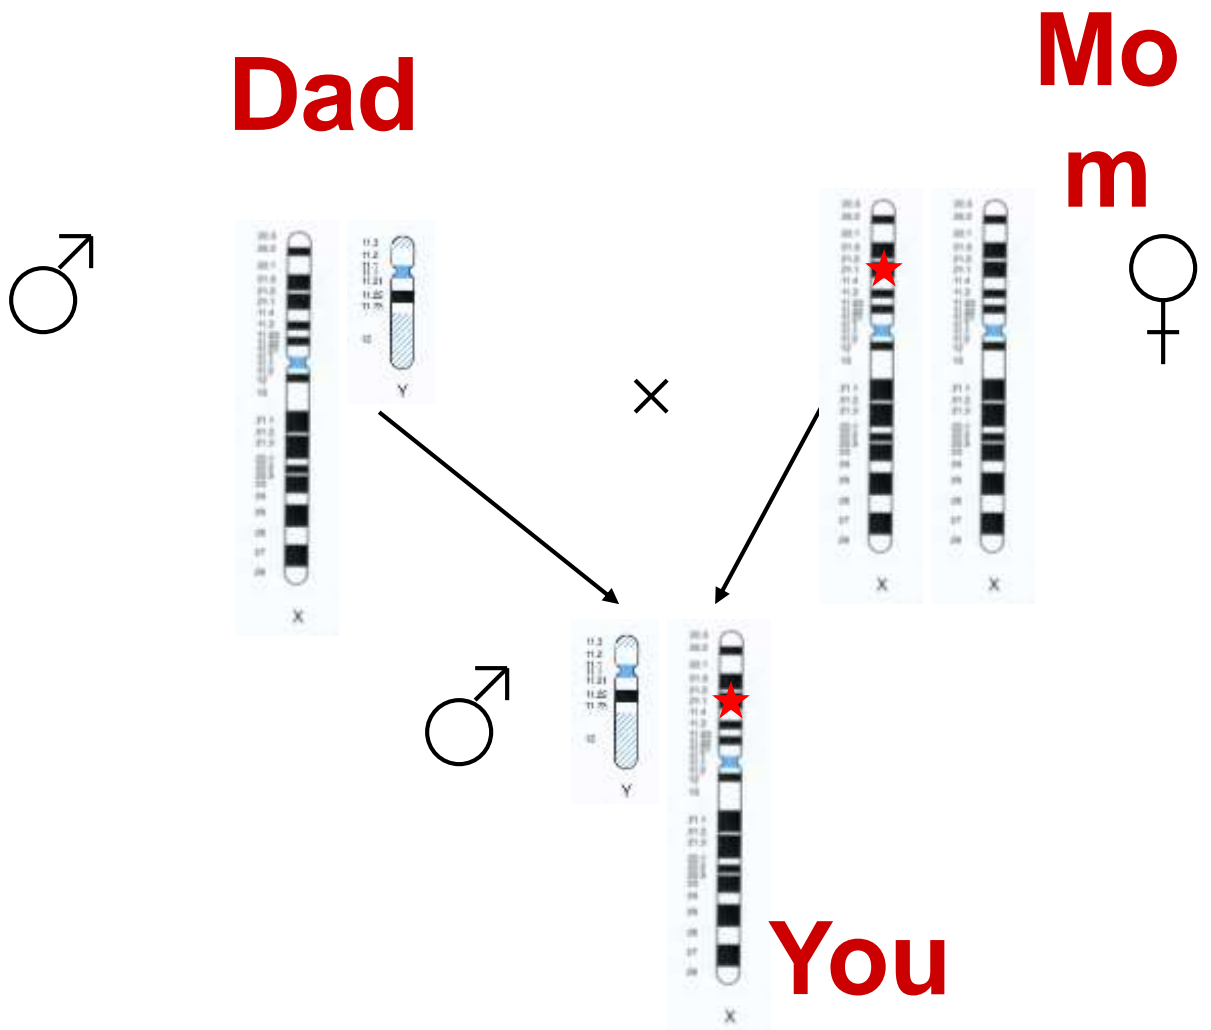

Cytosine (C)

Carbon atoms of sugar are numbered

Transmission of Genetic Material

DNA in Forensic Science

- The chemical structure of everyone's DNA is the same.
- The only difference between individuals is the order of the base pairs.
- This can give the valuable information to distinguish the individuals.
- So plays an important role in forensic investigations

The technique which promise correct identification, was established by Anupuma Raina, in 1992.

***DNA
FINGERPRINTING***

DNA Fingerprinting

DNA fingerprinting was established by Prof. Alec. J. Jeffrey (1984) while studying the gene of myoglobin at the University of Leicester

Techniques That revolutionized the field of DNA fingerprinting

- Polymerase Chain Reaction
- Capillary Electrophoresis

Markers for DNA Fingerprinting

- VNTR (Variable number tandem repeat)
- RFLP (Restriction Fragment Length Polymorphism)
- Microsatellites
- a) STRs (Short tandem repeats)
 - i) Autosomal
 - ii) YSTR
 - iii) Mt DNA
- b) SNPs (single nucleotide polymorphisms)

Multiplex PCR

Scanned Gel Image

- **Over 10 Markers Can Be Copied at Once**
- **Sensitivities to levels less than 1 ng of DNA**
- **Ability to Handle Mixtures and Degraded Samples**
- **Different Fluorescent Dyes Used to Distinguish STR Alleles with Overlapping Size Ranges**

Advantages of Short Tandem Repeats

PCR-based

Low Quality DNA

Degraded DNA

Advantages

Rapid typing

Abundant in genome

Sources of Biological Evidence

- Blood
- Semen
- Saliva
- Hair
- Skin cells
- Bone
- Teeth
- Tissue
- Vomit

Condoms

Envelopes

Cigarette Butts

Chewing gum

Drinking Cups

Under victim's fingernails

Applications of DNA Fingerprinting

Diversity

Mass Disaster

Crime Investigation

Identification

Paternity

Migration

Family tree

Wildlife Genomics

DNA FP

Baby Exchange

Rape

Application- Identification

Identification of the victims of

- Mass disaster
- Serial killing
- Natural Disasters (Tsunami)

Application-Immigration

Paternity

Exhibit No. 5935 : Allele data of the source of exhibit A
 Exhibit No. 5936 : Allele data of the source of exhibit B
 Exhibit No. 5937 : Allele data of the source of exhibit C
 Exhibit No. 5938 : Allele data of the source of exhibit D
 Exhibit No. 5939 : Allele data of the source of exhibit E

The alleles shown by blue colour in the source of the exhibit A are accounted for being present in the sources of exhibits B, D and E.

Rape cases

History of Case No.1

Rape case

A female of 20 yrs age raped at her residence

IO submitted :

1. Vaginal swab
2. Vaginal smear
3. Vaginal stains on undergarments
4. Blood sample of the accused was collected personally in the DNA Lab

Rape cases

- **Primer Used:**
- **Bpf 3.8, D1S80, D2S44 and**
- **PYNZ22**
- **Probability of observing identical patterns:**
- **0.233 or 1 in 1023**

Rape cases

Case No. 2

- 16 years old female raped at her residence
- Rape followed by subsequent conception
- Aborted on the Hon'ble court's order

Exhibits received:

- Fresh blood sample of victim and suspect
- Product of conception

GENOTYPE ANALYSIS FOR ESTABLISHING PATERNITY USING IDENTIFILER KIT

Sl. No.	Locus	Exhibit (Accused)	Exhibit (Mother)	Exhibit (Product of conception)	Exhibit A (Positive control)	Exhibit B (Negative control)

Diversity

DNA markers are used to study:

- i) The Human Diversity
- ii) Molecular relatedness amongst the individuals
- iii) Differentiation between the population subgroups

Migration Pattern

DNA markers are very useful to:

1. Trace the origin of human being
2. Study migration pattern
3. Mutation analysis
4. Study the selection of the characters

Pedigree Analysis

To create the maternal and Paternal family trees

To trace out the ancestry

Wildlife Genetics

- # Black Buck case
- # Identification of animal, plant species
- # Identification of microbial stains

Instrumentation

Thermal Cycler

Electrophoresis

Genetic Analyzer

DNA Extraction Machine

Picodrop
